

# production plan

**Operations include all activities associated with transforming INPUTS (like raw materials) into the FINAL PRODUCT. For example, machining, packaging, assembly, testing and other operations.**

How will you produce your product or service?

Will Importing/Exporting be involved?

What materials will your business consume?

- Where do they come from (e.g. how much travel involved) and how can you minimise this?
- Who are your suppliers and how will you select them?
